Specification

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). Cooperation of the applicant(s) is requested in correcting any errors of which applicant(s) may become aware of in the specification, in the claims and in any future amendment(s) that applicant(s) may file.

Applicant(s) is also requested to complete the status of any copending applications referred to in the specification by their Attorney Docket Number or Application Serial Number, **if any**.

The status of the parent application(s) and/or any other application(s) cross-referenced to this application, **if any**, should be updated in a timely manner.

Double Patenting

The obviousness-type double patenting rejection in the previous office action is withdrawn in view of the amendment to the claims.

Allowable Subject Matter

The allowable subject matter indicated in the previous office action is withdrawn in view of the translations of the German documents referred to as potentially relevant in the previous office action.

At this time, claims 2, 23 and 24 are objected to as depending on a rejected claim. Claims 3, 4, 6 and 8-21 are allowable over the prior art of record. The following new rejection is applicable to the remaining claims:

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over the provided translation of DE 201 19 021.

These claims are directed to a binder and method for the production thereof wherein the binder contains cement, moist green vitriol and sand with a granulation between 0.1mm and 0.4mm. See particularly page 2, and page 7.

The applied reference also teaches a hydraulic binder containing cement, moist iron vitriol and an inert background ingredient having mesh of about 0.2mm, substantially as claimed herein by applicant.

The reference does not specifically recite the word "sand". However, it is considered that such would have been obvious to the skilled artisan because the background material is defined as "limestone and other natural materials or similar fine-

grained or pulverized substances having large surface structure". The examiner considers that the skilled artisan could well have envisioned sand from this disclosure; it is an inexpensive natural material and clearly has an extremely large surface structure, based on its known adsorbent utility. The examiner considers that the skilled artisan would not have found the selection of sand unobvious for the foregoing reasons.

Conclusion

Applicant is advised that any evidence to be provided under 37 CFR 1.131 or 1.132 and any amendments to the claims and specification should be submitted prior to final rejection to be considered timely. It is anticipated that the next office action will be a final rejection.
